Eliminate holes in walls forever! Display, change, add, remove or re-position artwork instantly and effortlessly! The U Rail system is designed to be virtually invisible. It installs onto ceilings quickly and easily.

U Rail : System Overview

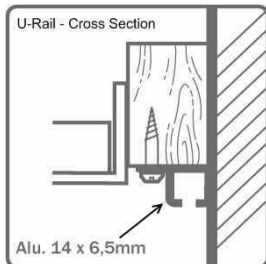

The U Rail track is pre-drilled with #2 holes spaced at 10 cm (approximately 4") and is intended specifically for ceiling installation. The track is not self-supporting and must be installed onto a solid structural backing. The U Rail track is particularly well suited to installations in recessed ceiling areas. Track sections can be joined end to end for continuous runs of any length.

Cables are supplied with Cobra® end fittings & simply rotate into or out of the track at any position. Cables slide in the track for horizontal adjustment. Hangers slide on the cables for vertical adjustment & lock into position when finger pressure is released. For maximum stability

2 hanging cables per frame are recommended (1 per top corner).

U Rail Track Specifications and Details

- **Tracks sections are aluminum, 200 cm (approx. 78.75") long.**
